Respondents by Job Role

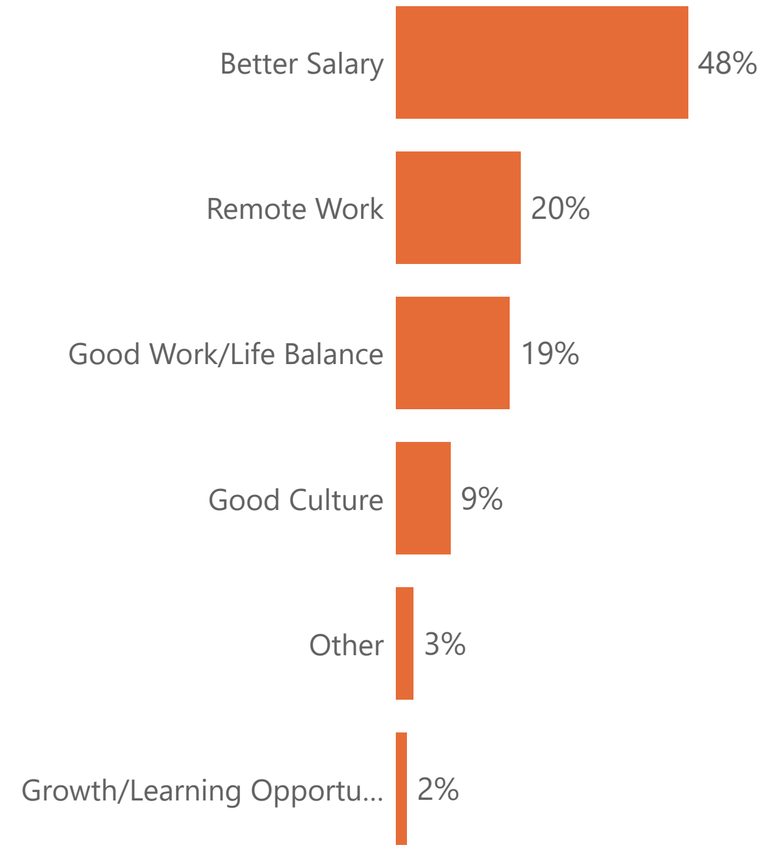

Satisfaction vs target (0 to 10)

Key Takeaway

Average satisfaction is 5.6 out of 10, 1.4 below the target of 7.

What they want most in a Job

Key Findings

What the data says across all 630 respondents, and what to do about it

1 Location moves pay the most

US respondents average $78.8K, against $36.3K elsewhere (2.2x).
Among Data Analysts alone it is $79.4K vs $36.9K.

62% of US respondents earn $66K+, vs 12% elsewhere.

Evidence: Pay & Geography page

2 Pay is the weakest link

Salary satisfaction averages 4.8 out of 10, the lowest of six ratings. Coworkers rate highest at 6.1. Only 17% rate their salary 8 or above.

Satisfaction page

3 Pay explains little of satisfaction

Overall satisfaction rises from 5.0 in the lowest pay band to about 6.3 to 6.5 in higher bands.

- Higher pay alone will not fix satisfaction. Track the other ratings too.

Satisfaction page

4 Switchers find entry harder

37% of career switchers call breaking in difficult, against 25% of non-switchers. A test says this gap is unlikely to be chance (p = 0.003).

Career Entry

5 Few are thriving

Only 90 of 615 rated respondents (15%) are both well paid and satisfied. 115 are well paid but unhappy; 318 are neither.

- Pay and satisfaction are different goals. Ask why the well-paid are unhappy.

Satisfaction

6 No significant gender gaps

Average pay is equal (p = 0.60). No rating differs significantly; the largest gap is Learning (women 5.7, men 6.1, p = 0.18).

- Collect a larger sample: only 26% of respondents are women.
